

Retrieval Event
Service

```
graph TD; A([Retrieval Event Service]) --> B[Get File System Information from SD Card]; B --> C[Send File System Information to Base Station]; C --> D[Send All Data to Base Station]; D --> E([End]);
```

This flowchart illustrates a five-step process for a Retrieval Event Service. It begins with an oval-shaped start node labeled 'Retrieval Event Service'. This is followed by three rectangular process nodes: 'Get File System Information from SD Card', 'Send File System Information to Base Station', and 'Send All Data to Base Station'. The process concludes with an oval-shaped end node labeled 'End'. All steps are connected by downward-pointing arrows, indicating a sequential flow.

Get File
System
Information
from SD Card

Send File
System
Information to
Base Station

Send All Data
to Base
Station

End
